

DJPower ADVERTISER/IMAGE SHOW Overview

The Advertiser / Image Show is one of the most useful features in DJPower. You can program a continuous slide show throughout the building with programmable display length and mix length and mix mode. With the saving capability, making specific sets of slides to play for specific days of the week is an easy task. Program can play in a random mode or in a given sequences. You can automatically start the show when DJPower program opens.

The Image Show is compatible with JPG, GIF, BMP formats which are commonly used. A digital camera can even be used to display the pictures directly from memory of the camera.

PLAYING THE IMAGE LIST

To start slide show, click on the “Play” button. To stop the image show, click on the “Stop” button. To just review the images, one by one, click on the “Next” button to view each image.

The images in the Play List can play in order from top to bottom. Or, to play in random order, click on the Random Pick box so that a check is visible.

MIXING THE IMAGES

MIX MODE

To have the images blend together as they change from one to the next, select the Mix Mode from the pull down menu. If no mixing is desired, choose “No Video Mixing”.

DISPLAY RATE

To select the length of time each image will display, click the up or down arrows in the Rate window. The image will display for that number of seconds before changing to the next image.
