

DJPower VIDEO Overview

(MPEG Layers 1, 2 & 4; AVI, MPV, MV1, MV2, DAT, VOB, plus directly from the DVD)

VIDEO

This feature allows you to spice up your club or DJ Gig by adding visual to you audio. You can play the latest music videos.

As a DJ, you can show potential customers a video of how you run your gig right on your computer.

As a club, you can also use this feature to promote bar specials, display your own logo, and more.

KARAOKE

This Add On feature enables you to become a **KJ** (Karaoke Jockey) and a **DJ** at the same time without the nightmare of hauling all that extra equipment (Karaoke player and hundreds of Karaoke disks), to and from a job. With the same Main screen functions you have already learned in previous chapters, you can switch from standard music to **Karaoke** and back again with virtually no effort.

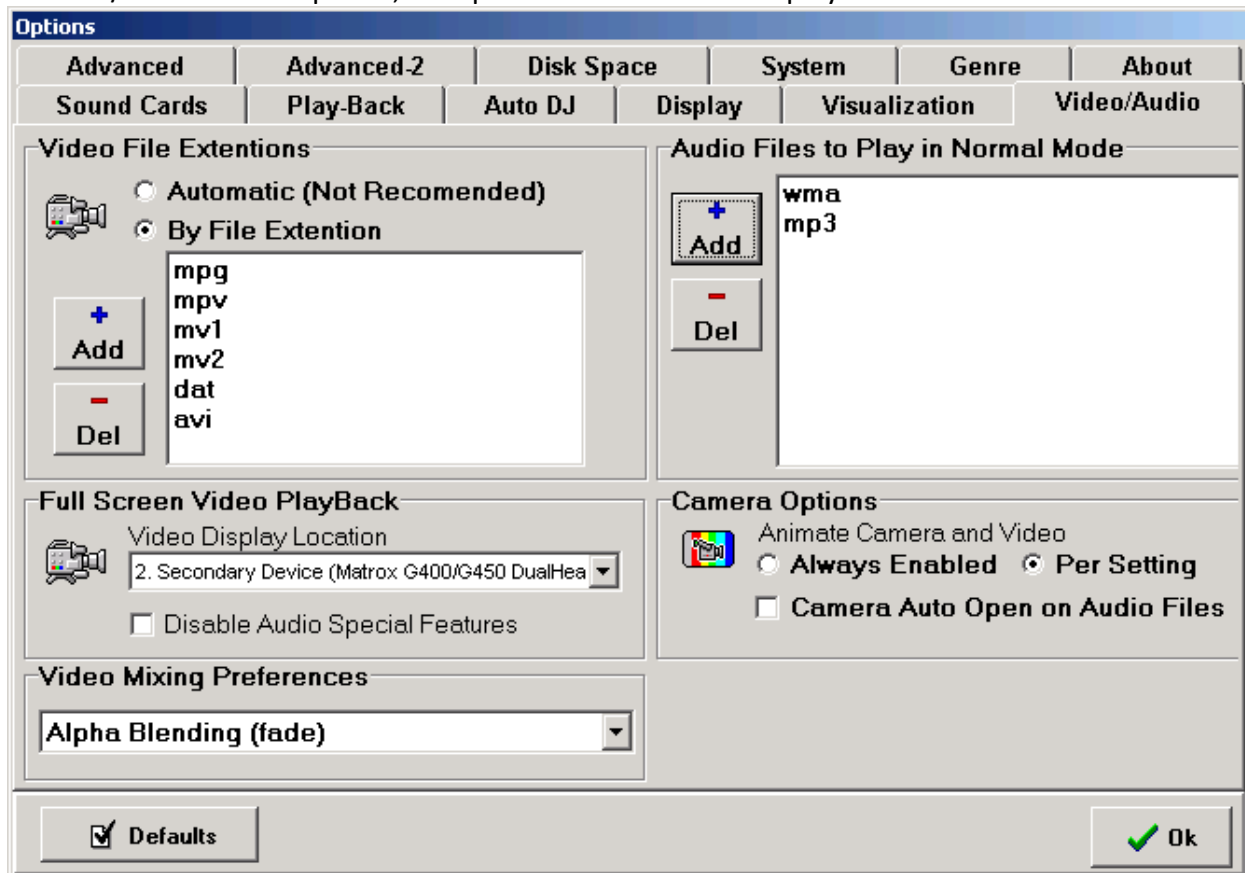

NOTE: DJPower has a Karaoke software add-on that offers MP3+G support. This is a more popular format for karaoke. The karaoke content can be “ripped” at a higher speed from a CD-ROM drive that supports CDGs. Then the karaoke content is stored on the computer in a format that is much smaller than the standard MPEG format.

Once everything is configured, it’s just a matter of adding the videos to the Songs To Play List, just like any audio content. DJPower will recognize the video as such, and then display the video.

Songs To Play	Start	Length	Pitch	Vol	Delay	BPM	Folder
All My Songs	02:18	00:48	100%	50%		222	DEMO SONGS
I learned from the best-Whitn	02:19	04:25	100%	100%			SAMPLE VIDEO
ALL STAR JAM SESSION	02:24	01:18	100%	100%			DEMO SONGS

EXPLOSION - 1 (music drone	02:29	00:08	100%	100%			DEMO SONGS
HERE COME DA FUNK	02:29	01:28	100%	100%			DEMO SONGS
ROCK N ROLL	02:31	00:44	100%	100%			DEMO SONGS
ROCKIN' COUNTRY	02:31	01:08	100%	100%			DEMO SONGS
SUSPENSE IS KILLING ME	02:33	01:13	100%	100%			DEMO SONGS

VIDEO MIXING OPTIONS

In Video/Audio tab of Options, set up can be done for video playback.

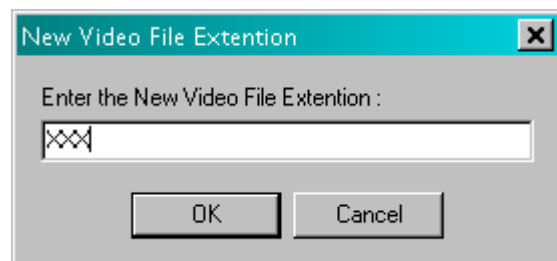

Video File Extensions

“Automatic (Not Recommended)” will allow DJPower to automatically detect video files. This is not recommended as DJPower may not correctly identify the files properly in this mode.

“By File Extension” is the recommended choice.

To add an extension, click on “Add”. This will open the “New Video File Extension” window. Type in the file extension and click “OK”.

To delete an extension, highlight the extension in the list by clicking on it, and then click “Del”.

Video Mixing Preferences

This allows for a variety of mixing methods. To choose the desired one, click

on the down arrow, and then a list will appear. Scroll up and down the list to find the desired mix. Click on it, and then Click on OK.

52 different transitions available!
